By carrying out EHS due diligence and compliance audits, it is possible to detect and calculate unforeseen environmental, legal and safety liability risks with new acquisitions. Due diligence audits can involve two phases:

- Phase I: aims to identify and describe key issues like soil contamination, air emissions, waste management, industrial safety, legal issues (permits), loss experience etc. Based on the results of Phase I, Phase II is recommended;
- Phase II activities aim to investigate and validate the findings of Phase I a step further, in order to quantify the potential risks and estimate the remediation costs. Normally this includes a soil and/or asbestos survey.

It is essential that Due diligence audits can be executed on very short notice. TOP-Consultants can provide you this service.

Compliance audits are carried out in order to establish if activities comply with the appropriate EHS legislation, and anticipates on new legislations.

References EHS Due diligence and compliance audits
